

**COURSE STRUCTURE  
AND  
DETAILED SYLLABUS**

**FOR**

**M.TECH  
(COMPUTER AIDED STRUCTURAL ENGINEERING)  
REGULAR  
2015 – Regulations**

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY  
COLLEGE OF ENGINEERING (AUTONOMOUS)  
ANANTAPUR – 515 002 (A.P.)**

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY**  
**COLLEGE OF ENGINEERING :: (AUTONOMOUS) - ANANTAPUR**  
**CIVIL ENGINEERING DEPARTMENT**  
**Curriculum & Course Structure for M.Tech Course**  
**(Computer Aided Structural Engineering) 2015**  
**For the batches admitted from 2015**

**I SEMESTER:**

Code	SUBJECT	L	P	C
15D10102	Computational Numerical Methods	4	0	4
15D11101	Matrix Methods of Structural Analysis	4	0	4
15D11102	Theory of Elasticity	4	0	4
15D12101	C++ and Data Structures	4	0	4
	Elective – I	4	0	4
15D11104	1. Experimental Stress Analysis			
15D12102	2. Optimization in Structural Design			
	Elective – II	4	4	2
15D12103	1. Modelling, Simulation & Computer Applications			
15D11107	2. Prestressed Concrete			
15D12104	CAD Laboratory – I	0	4	26

**II SEMESTER:**

Code	SUBJECT	L	P	C
15D11201	Structural Dynamics	4	0	4
15D11202	Finite Element Analysis	4	0	4
15D12201	Artificial Neural Networks	4	0	4
15D12202	CAD & Computer applications in Structural Engineering	4	0	4
	Elective – III	4	0	4
15D11204	1. Analysis of Shells and Folded Plates			
15D12203	2. Reliability Based Engineering Design			
15D11207	3. Earthquake Resistant Structures			
	Elective – IV	4	4	2
15D12204	1. Management Information Systems			
15D11210	2. Fracture Mechanics			
15D11206	3. Advanced Concrete Technology			
15D54201	Research Methodology (Audit Course)			
15D12205	CAD Laboratory – II	2	4	26

**III & IV SEMESTERS:**

<b>Code</b>	<b>Subject</b>	<b>T</b>	<b>P</b>	<b>C</b>
15D12301	<b>III Semester</b> <b>Seminar – I</b>	<b>0</b>	<b>4</b>	<b>2</b>
15D12401	<b>IV Semester</b> <b>Seminar – II</b>	<b>0</b>	<b>4</b>	<b>2</b>
15D12302	<b>III &amp; IV Semester</b> <b>Project work</b>	<b>--</b>	<b>--</b>	<b>44</b>
		<b>0</b>	<b>8</b>	<b>48</b>

**Note :All End Examinations (Theory and Practical)are of three hours duration.**

**T-Tutorial**

**L-Theory**

**P-Practical/Drawing**

**C-Credits**

**Subject Code:15D10102**

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING)**

**First Semester**

**COMPUTATIONAL NUMERICAL METHODS**

**UNIT-I**

Solution of Non-linear Equations: Newton-Raphson method, Von-mises formula, Chord's method, bisection method- Comparative study-solution of cubic equation and quartic equation. Numerical integration: Newton-Cotes integration formulas- Trapezoidal rule-Romberg Integration – Simpson's rule – Gaussian quadrature – Errors in integration formulas – Multiple integration with variable limits.

**UNIT-II**

Solution of system of equations: Gauss elimination method- gauss-Jordan method- L-U decomposition – Errors in the solution- iterative methods – solution of sets of non linear equations.

Boundary Value Problems and Characteristics – Value problems: Shooting method- solution through a set of equations – Derivative boundary conditions – characteristic value problems – Eigen values of matrix by iteration.

**UNIT-III**

Numerical Solution of Elliptical partial differential Equations: Equilibrium temperatures in a heated slab-Equation of steady state heat flow – Laplace equation on rectangular region – Poisson equation –Derivative boundary conditions.

**UNIT-IV**

Numerical Solution of parabolic partial Differential equations: Explicit Method- simple implicit method Crank- Nicolson method- Derivative boundary conditions – stability and convergence criteria - Equations in two dimensions.

**UNIT-V**

Finite Element method: General approach – Finite Element application in one dimension and 2-D problems.

**TEXT / REFERENCE BOOKS:**

1. Numerical Methods for Engineers by Steven c.chapra and Raymond P.canal –Mc Graw Hill book company.
2. Applied Numerical Analysis by Curtis .F.Gerald-Addition-wesley Publishing company.
3. C. Language and Numerical Methods by C.Xavier-New age international Publishers

**Subject Code:15D11101**

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING)**

**First Semester**

**MATRIX METHODS OF STRUCTURAL ANALYSIS**

- 1. INTRODUCTION:-**Indeterminacy-Determination of static and kinematic indeterminacies of two-dimensional and three-dimensional portal frames, pin jointed trusses and hybrid frames-coordinate systems –structural idealization. Introduction to Matrix Methods of Analysis-Flexibility and stiffness matrices-Force displacement relationships for axial force, couple, torsional moments – stiffness method of analysis and flexibility method of analysis.
- 2. ANALYSIS OF CONTINUOUS BEAMS-** stiffness method and flexibility method of analysis –continuous beams of two and three spans with different end conditions-internal hinges.
- 3. ANALYSIS OF TWO DIMENSIONAL PORTAL FRAMES & PINJOINTED TRUSSES** – stiffness and flexibility method of analysis of 2D portal frames with different end conditions-plotting of bending moment diagrams. Computation of joint displacement and member forces for pinjointed trusses.
- 4. TRANSFORMATION OF CO-ORDINATES** - Local and Global co-ordinate systems-transformation of matrices from local to global coordinates of element stiffness matrix-direct stiffness method of analysis-assembly of global stiffness matrix from element stiffness matrices –static condensation-sub-structuring.
- 5. EQUATION SOLVERS-**solution of system of linear algebraic equations-direct inversion method-gauss elimination method-Cholesky method-banded equation solvers-frontal solution technique.

**M.Tech (Computer Aided Structural Engineering)  
First Semester  
THEORY OF ELASTICITY**

**1. INTRODUCTION TO PLANE STRESS AND PLANE STRAIN ANALYSIS:**

Elasticity –Notation for forces and stresses-Components of stresses –components of strain –Hooke’s law. Plane stress-plane strain-Differential equations of equilibrium-Boundary conditions- Compatibility equations-stress function-Boundary conditions.

**2. TWO DIMENSIONAL PROBLEMS IN RECTANGULAR COORDINATES:**

Solution by polynomials-Saint Venant’s principle-Determination of displacements-bending of simple beams-application of Fourier series for two dimensional problems - gravity loading.

**3. TWO DIMENSIONAL PROBLEMS IN POLAR COORDINATES :**

General Equation in polar co-ordinates - stress distribution symmetrical about an axis – Pure bending of curved bars- strain components in polar coordinates-Displacements for symmetrical stress distributions-simple symmetric and asymmetric problems-General solution of two dimensional problem in polar coordinates-Application of the general solution of two dimensional problem in polar coordinates-Application of the general solution in polar coordinates.

**4. ANALYSIS OF STRESS AND STRAIN IN THREE DIMENSIONS:** Principle stress - ellipsoid and stress-director surface-Determination of principle stresses- Maximum shear stresses-Homogeneous deformation-principle axis of strain rotation.**GENERAL THEOREMS:**

Balance laws - Differential equations of equilibrium- conditions of compatibility - Determination of displacement-Equations of equilibrium in terms of displacements-principle of superposition-Uniqueness of solution –the Reciprocal theorem.

**5. TORSION OF PRISMATICAL BARS:**

Torsion of prismatic bars- Elliptical cross section-other elementary solutions-membrane analogy-Torsion of rectangular bars-solution of torsional problems by energy method-use of soap films in solving torsional problems-hydra dynamical analogies-Torsion of shafts, tubes, bars etc.

**TEXT/REFERENCE BOOKS :**

1. Theory of Elasticity and Plasticity by Timoshenko, S., MC Graw Hill Book company.
2. Advanced Strength of materials by Papoov, MC Graw Hill Book company.
3. Theory of Elasticity and Plasticity by Sadhu Singh. Khanna Publishers.
4. Chen, W.F. and Han, D.J.Plasticity for structural Engineers, Springer – Verlag, New York.
5. Lubliner, J., Plasticity theory, Mac Millan Publishing Co., New York.
6. Foundations of Solid Mechanics by Y.C.Fung, PHI Publications.
7. Advanced Mechanics of Solids by L.S. Srinath, Tata MC Graw Hill Book company.

## **8. Subject Code:15D12101**

### **M.Tech (Computer Aided Structural Engineering) First Semester**

#### **C++ AND DATA STRUCTURES**

##### **Unit I :**

Object oriented programming :- Procedure – oriented programming, object oriented programming paradigm, basic concepts of oop, benefits of opp. Basics of C++, key words, data types, operators, functions in C++, classes and objects.

Concepts of C++:- Constructors, parameterized constructors, copy constructor, destructors, Inheritance – single, multilevel, multiple, Hierarchical, Hybrid, parameter passing methods.

##### **Unit II :**

Sorting: Bubble sort, selection sort, Insertion sort, Quick sort, Merge sort, Heap sort , Radix sort.  
Searching: Binary Search, Linear Search.

##### **Unit III :**

Linked Lists :- Single Linked List, Circular Linked List, Double Linked List, Circular Double Linked, insertion in to and deletion from linked list.

##### **Unit IV :**

Stacks:- Introduction, Implementation using arrays and linked lists, applications: Arithmetic Expression, Implementation of Recursion, Towers of Hanoi,.

Queues: Introduction, Implementation using arrays and linked lists, Types of queues, Applications

##### **Unit V :**

Trees :- binary trees, representing binary trees in memory, Operations on Binary Trees, Types of trees.

##### **TEXT BOOKS :**

1. Object oriented programming with C++, “Balaguru Swamy”, Tata McGraw Hill.
2. Classic Data Structures, “D. Samantha”, PHI Learning Pvt. Ltd..
3. Data structures, Algorithms and Applications in C++, S. Sahni, University Press (India) Pvt.Ltd, 2nd edition, Universities Press.

##### **REFERENCES :**

1. Data structures and Algorithms in C++, Michael T.Goodrich, R.Tamassia and Mount, Wiley student edition, John Wiley and Sons.
2. Data structures and Algorithm Analysis in C++, Mark Allen Weiss, Pearson Education. Ltd., Second Edition.
3. Data structures and algorithms in C++, 3rd Edition, Adam Drozdek, Thomson
4. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
5. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.
6. Data Structures using C++, D.S. Malik, Cengage Learning, India Edition.

**Subject Code:15D11104**

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING)**

**EXPERIMENTAL STRESS ANALYSIS**

**(Elective-I)**

**First Semester**

**1. PRINCIPLES OF EXPERIMENTAL APPROACH :-**

Merits of Experimental Analysis Introduction, uses of experimental stress analysis advantages of experimental stress analysis, Different methods –Simplification of problems.

**2. STRAIN MEASUREMENT USING STRAIN GAUGES :-**

Definition of strain and its relation of experimental Determinations Properties of Strain-Gauge Systems-Types of Strain Gauges –Mechanical, Acoustic and Optical Strain Gauges. Introduction to Electrical strain gauges - Inductance strain gauges – LVDT – Resistance strain gauges – various types –Gauge factor – Materials of adhesion base.

**3. STRAIN ROSSETTES AND NON – DESTRUCTIVE TESTING OF CONCRETE:-**

Introduction – the three elements Rectangular Rosette – The Delta Rosette Corrections for Transverse Strain Gauge.

Ultrasonic Pulse Velocity method –Application to Concrete. Hammer Test – Application to Concrete.

**4. THEORY OF PHOTOELASTICITY :-**

Introduction –Temporary Double refraction – The stress Optic Law –Effects of stressed model in a polariscope for various arrangements – Fringe Sharpening. Brewster’s Stress Optic law.

**5. TWO DIMENSIONAL PHOTOELASTICITY :-**

Introduction – Isochromic Fringe patterns- Isoclinic Fringe patterns passage of light through plane Polariscope and Circular polariscope Isoclinic Fringe patterns – Compensation techniques – Calibration methods – Separation methods – Scaling Model to prototype Stresses – Materials for photo – Elasticity Properties of Photoelastic Materials.

**Reference Books:-**

1. Experimental stress analysis by J.W.Dally and W.F.Riley, College House Enterprises
2. Experimental stress analysis by Dr.Sadhu Singh.khanna Publishers
3. Experimental Stress analysis by U.C.Jindal, Pearson Publications.
4. Experimental Stress Analysis by L.S.Srinath, MC.Graw Hill Company Publishers.

**Subject Code:15D12102**

**M.TECH (COMPUTER AIDED STRUCTURAL ENGINEERING)**

**I – SEMESTER**

**OPTIMIZATION IN STRUCTURAL DESIGN**

**(Elective-I)**

1. System approach – Techniques of operation research – Decision making – Research models. Basic concepts of minimum weight, minimum cost design, variables, constraints, model and model building, objective function, classical methods.
2. Concept of linear programming, Integer programming, Quadratic programming, Dynamic programming and geometric programming methods for optimal design of structural elements. Linear programming: Standard form of linear programming problem, geometry of linear programming problem. Solution of system of linear simultaneous equations. Application of linear programming methods for plastic design of frames Computer search methods of univariate and multivariate minimisation.
3. Simplex method. – Revised simplex method, duality of linear programming sensitivity or post optimality analysis.
4. Optimization by structural theorems. Maxwell Mitchell and Heymans theorem for structures and frames.
5. Optimization Techniques applied to fully stressed design with deflection constraints, optimality criterion methods.

**TEXT / REFERENCE BOOKS:**

6. A.J. Morris (Editor) Foundations of Structural Optimization – a unified Approach, John Wiley and Sons, Chichester, 1982.

**Subject Code:15D12103**

**M.TECH (COMPUTER AIDED STRUCTURAL ENGINEERING)**

**I – SEMESTER**

**MODELLING, SIMULATIONS AND COMPUTER APPLICATIONS**

**(Elective-II)**

- 1. System models:** Concepts, continuous and discrete systems, system modeling, types of models, subsystems, corporate model, and system study.**System simulation:** Techniques, comparison of simulation and analytical methods, types of simulation, Distributed log models, cobweb models.
- 2. Continuous System Simulation:** Numeric solution of differential equations, Analog computers, Hybrid computers, continuous system simulation languages CSMP, system dynamic growth models, logistic curves.
- 3. Probability concepts in simulation:** Monte Carlo techniques, stochastic variables, probability functions, Random Number generation algorithms.
- 4. Queuing Theory:** Arrival pattern distributions, servicing times, queuing disciplines, measure of queues, mathematical solutions to queuing problems.**Discrete System Simulation:** Events, generation of arrival patterns, simulation programming tasks, analysis of simulation output.
- 5. GPSS & SIMSCRIPT, programming in GPSS:** simulation programming Techniques: Data Structures, Implementation of activities, events and queues, Event scanning, simulation algorithms in GPSS and SIMSCRIPT.

**TEXT/ REFERENCE BOOKS:**

1. Geoffery Gordon: System Simulation, PHI.
2. Naylor, Thomas, H. Computer Simulation experiments with models of economic systems, John Wiley and sons, 1971.
3. Naylor Thomas, H and ET. AI. Computer simulation techniques, John wiley and Sons, 1966.
4. Louis Wdward Alfeld and Alan K.Graham, Introduction to Urban Dynamics, wright – Allen Press Inc., Massachusetts, 1976.
5. Richard J.Chorley and Peter haggett, Models in Geography, Methuen & Co.Ltd., 1977.
6. Hamdy A.Taha, Operations Research – An Introduction, Macmillan Company, New York, 1987.

**Subject Code:15D11107**

**M.TECH (COMPUTER AIDED STRUCTURAL ENGINEERING)  
I – SEMESTER  
PRESTRESSED CONCRETE STRUCTURES  
ELECTIVE – II**

- 1. INTRODUCTION:**Development of prestressed concrete –Advantages and Disadvantages of PSC over RCC –General principles of pre-stressing-pre tensioning and post tensioning –Materials used in PSC-high strength concrete –High tension steel-Different types /methods/systems of prestressing.
- 2. Losses of prestress:** Estimation of the loss of prestress due to various causes like elastic shortening of concrete ,creep of concrete, shrinkage of concrete, relaxation of steel, slip in anchorage, friction etc.
- 3. Flexure & Deflections:** Analysis of sections for flexure in accordance with elastic theory-Allowable stresses-Design criteria as per I.S code of practice –Elastic design of Beams (rectangular, I and T sections) for Flexure –Introduction to partial prestressing. Introduction-Factors influencing deflections-short term and long term deflections of uncracked and cracked members.
- 4. Shear, bond, Bearing and Anchorage:** shear in PSC beams –Principal stresses – Conventional elastic design for shear-transfer of prestress in pretensioned members-transmission length –Bond stresses-bearing at anchorage –Anchorage zone stresses in post-tensioned members-Analysis and design of end blocks by Guyon, Magnel and approximate methods –Anchorage zone reinforcements.
- 5. Statistically indeterminate structures:** Introduction –advantages and disadvantages of continuity –Layouts for continuous beams-primary and secondary moments –Elastic analysis of continuous beams-Linear transformation-Concordant cable profile-Design of continuous beams.**Circular prestressing:** Introduction –Circumferential prestressing Design of Prestressed concrete tanks –vertical prestressing in tanks-Dome prestressing.

**REFERENCE BOOKS:**

1. Prestressed Concrete by S. Krishna raju, TMH Pubilishers.
2. Prestressed Concrete by S. Ramamrutham, Dhanpati Rai Pubilicartions.
3. Prestressed concrete design by Praveen Nagarajan, Pearson Pubilications.
4. T.Y.Lin, Design of Prestressed Concrete Structures, Asian Publishing house, Bombay, 1953.
5. Y.Guyon, Prestressed Concrete, Vol.I&II, Wiley and Sons, 1960.
6. F.Leohhardt, Prestressed concrete Design and construction, Wilhelm Ernst and shon, Berlin, 1964.
7. C.E.Reynolds and J.C. Steedman, Reinforced concrete designers hand bood, A view point publication, 1989.
8. Edward P.Nawy, Prentise Hall – Prestressed Concrete.
9. Prestressed Concrete – by Raj Gopal, Narsoa Pubilications.

**10. Subject Code:15D12104**

**M.TECH (COMPUTER AIDED STRUCTURAL ENGINEERING)**

**I – SEMESTER**

**CAD LABORATORY – I**

1. Simple Programs: Prime number, Factorial of a number, conversion of integers into words, swapping of two integers, addition and multiplication of matrices.
2. Functions : Inline functions, functions with parameters
3. Objects : Objects with arrays, counting of votes
4. Analysis of cantilever, simply supported beam, fixed beams, continuous beams for different loading conditions.
5. Design of R.C.C. beams, slabs, foundations.
6. Design of steel tension Members.

**Subject Code:15D11201**

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING)**

**II – Semester**

**STRUCTURAL DYNAMICS**

- 1. Theory of Vibrations:** Introduction –Elements of a vibratory system – degrees of freedom-continuous systems –lumped mass idealization –Oscillatory motion –Simple harmonic motion –pictorial representation of S.H.M - free vibrations of single degree of Freedom (SDOF) systems –undamped and Damped –Critical damping –Logarithmic decrement –Forced vibrations of SDOF systems-Harmonic excitation –Dynamic magnification factor- Bandwidth.Fundamental objective of dynamic analysis-types of prescribed loading- Methods of discretization- Formulation of the equations of motion.
- 2. Single degree of Freedom System:** Formulation and solutions of the equation of motion - free Vibration response –response to harmonic, periodic, Impulsive and general Dynamic loading –Duhamel integral
- 3. Multi Degree of Freedom System:** selection of the degree of freedom –Evaluation of structural property matrices-Formulation of the MDOF equations of motion –Undamped free vibrations-Solution of Eigen value problem for natural frequencies and mode shapes- Analysis of dynamic response –Normal coordinates –Uncoupled equations of motion – Orthogonal properties of normal modes-mode superposition procedure
- 4. Practical vibration analysis:** Stodola method- Fundamental mode analysis –analysis of second and higher modes –Holzer’s method –basic procedure –transfer matrix procedure
- 5. Introduction to Earthquake analysis:** Introduction –Excitation by rigid base translation –Lumped mass approach -SDOF and MDOF system- I.S code methods of analysis.**Continuous system:** Introduction –Flexural vibrations of beams- Elementary case-Equation of motion –Analysis of undamped free shapes of simple beams with different end conditions-principles of application to continuous beams.

**Subject Code:15D11202**

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING)**

**II – Semester  
FINITE ELEMENT ANALYSIS**

- 1. Introduction-**Concepts of FEM –steps involved –merits &demerits –energy principles – Discretization –Rayleigh –Ritz method of functional approximation.**Elastic formulations:** Stress equations-strain displacement relationships in matrix form-plane stress, plane strain and Axi-symmetric bodies of revolution with axi symmetric loading
- 2. One Dimensional FEM-**Stiffness Matrix for Beam and bar elements shape functions for ID elements –static condensation of global stiffness matrix-solution –Initial strain and temperature effects.
- 3. Two Dimensional FEM-**Different types of elements for plane stress and plane strain analysis –Displacement models –generalized coordinates-shape functions-convergent and compatibility requirements –Geometric Invariance –Natural coordinate system-area and volume coordinates-Generation of element stiffness and nodal load matrices –static condensation.
- 4. Isoparametric formulation-**Concept, Different isoparametric elements for 2d analysis-Formulation of 4-noded and 8-noded isoparametric quadrilateral elements –Lagrangian elements-serendipity elements.**Axi symmetric analysis** –bodies of revolution-axi symmetric modelling –strain displacement relationship-formulation of axi symmetric elements.
- 5. Three Dimensional FEM-**Different 3-D elements, 3D strain –displacement relationship-formulation of hexahedral and isoparametric solid element.

**REFERENCE BOOKS:**

- Finite Elements Methods in Engineering by Tirupati. R. Chandrnpatla and Ashok D. Belegundu – Pearson Education Publications.

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING)  
II – Semester**

## **ARTIFICIAL NEURAL NETWORKS**

### **UNIT I:**

**INTRODUCTION:** History Of Neural Networks, Structure And Functions Of Biological And Artificial Neuron, Neural Network Architectures, And Characteristics of ANN, Applications, And Basic Learning Rules: Hebbian Learning, Competitive Learning, And Boltzmann Learning.

### **UNIT-II**

**SUPERVISED LEARNING-1:** Single Layer Neural Network and architecture, McCulloch-Pitts Neuron Model, Perception Model, Perception Convergence Theorem, ADALINE, Delta Learning Rule.

### **UNIT III:**

**SUPERVISED LEARNING-2:** Multi Layer Neural Network and architecture, MADALINE, Back Propagation learning, Back Propagation Algorithm.

**UNSUPERVISED LEARNING-1:** Kohonen Self Organization Networks, Hamming Network and MAXNET, Learning Vector Quantization, Mexican hat.

### **UNIT IV:**

**UNSUPERVISED LEARNING-2:** Counter Propagation Network, Forward Only Counter Propagation Network, Adaptive Resonance Theory (ART) -Architecture, Algorithms.

**ASSOCIATIVE MEMORY NETWORKS :** Introduction, Auto Associative Memory ,Hetero Associative Memory, Bidirectional Associative Memory(BAM) -Theory And Architecture, BAM Training Algorithm-Storage.

### **UNIT V:**

**HOPFIELD NETWORK:** Introduction, Architecture Of Hopfield Network, Discrete And Continuous Hopfield Network, Iterative Auto Associative Memory Network (Linear Auto Associative Memory, Brain-In-The-Box Network), Temporal Associative Memory Architecture .

### **TEXT BOOKS:**

1. Jacek M. Zurada , ” Introduction to Artificial Neural Systems ” – Jaico Publishing, 2006.
2. S.N.Sivanandam , S.N.Deepa, “ Introduction to Neural Networks using MATLAB 6.0 “ , Tata McGraw- Hill Publications, 2006.

### **REFERENCE BOOKS:**

**Subject Code:15D122002**

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING)**

**II – Semester**

**CAD & COMPUTER APPLICATIONS IN STRUCTURAL ENGINEERING**

- 1. Introduction to computer aided design** – Reasons for implementing CAD – Design process – Applications of computers to design – Benefits of computer Aided design.  
**Principles of computer graphics** – Introduction, Graphic primitives, point plotting, drawing of lines, Bresenham's Algorithm, C program to draw a line, circle, ellipse using breasenham's algorithm.
- 2. Transformation in Graphics** – Coordinate system used lin graphics & windowing, view port, 2 – D transformations, clipping, 3-D transformation; C-graphics.
- 3. Stiffness Method** : Microsoft Excel procedure for stiffness method of analysis step – by step procedure using Excel, examples using Excel.
- 4. Analysis of beams using stiffness method** : Long hand solution of single span beams, continuous beams solution of single span beams, continuous beams using Excel.
- 5. Database** : Introduction, concept of a database, objectives of databases, Design of data base, design consideration of data base.

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING) II- SEMESTER  
II – Semester**

**ANALYSIS OF SHELLS AND FOLDED PLATES  
(Elective-III)**

- 1. Equations of equilibrium :** Introduction, classification, derivation of stress Resultants, Principles of membrane theory and bending theory.
- 2. Cylindrical shells:** Derivation of governing DKJ equation for bending theory, details of Schorer's theory, Applications to the analysis and design of short shells and long shells. Introduction of ASCE manual co-efficients for design.
- 3. Introduction to shells of double curvature:** ( other than shells of revolution:) Geometry and analysis of elliptic paraboloid, rotational paraboloid and hyperbolic paraboloid shapes by membrane theory.
- 4. Folded Plates:** Folded plate theory, plate and slab action, Whitney's theory, Simpson's theory for the analysis of different types of folded plates (Design is not included)
- 5. Shells of double Curvature-**Surfaces of revolution .Derivation of equilibrium equations by membrane theory, Applications to spherical shell and rotational Hyperboloid

**TEXT / REFERENCE BOOKS:**

1. Design and construction of concrete shell roofs by G.S. Rama Swamy – CBS Publishers & Distributors, 485, Jain Bhawan Bholanath Nagar, Shahotra, Delhi.
2. Fundamentals of the analysis and design of shell structures by Vasant S.Kelkar Robert T.Swell – Prentice hall, Inc., Englewood cliffs, New Jersey -02632.
3. N.K.Bairagi, Shell analysis, Khanna Publishers, Delhi, 1990.

**Subject Code:15D12203**

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING) II- SEMESTER  
II – Semester**

**RELIABILITY BASED ENGINEERING DESIGN**

**(Elective-III)**

1. Basic statistics and probability – Concepts of structural safety – Resistance parameters and distributions. Probabilistic analysis of loads live load & wind load
2. Determination of reliability, Monte Carlo study of structural safety.
3. Levels of reliability methods and their suitable adoption in structural engineering elements.
4. Level 2 reliability methods including advanced level 2 method.
5. Reliability analysis of structural components – Reliability based design determination of partial safety factors, code calibration – Reliability of structural systems application to steel & concrete structures, off shore structures.

**Subject Code:15D11207**

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING)**

**II – Semester**

**EARTHQUAKE RESISTANT STRUCTURES**

**ELECTIVE – III**

1. **Engineering seismology :**  
Earthquake – causes of earthquake – earthquakes and seismic waves – scale and intensity of earthquakes – seismic activity – Measurements of earth quakes – seismometer- strong motion accelerograph / field observation of ground motion – analysis of earthquakes waves – earth quake motion – amplification of characteristics of surface layers – earthquake motion on the ground surface;
2. **Vibration of structures under ground motion:**  
Elastic vibration of simple structures – modelling of structures and equations of motion – freevibrations of simple structures – steady state forced vibrations – Non steady state forced vibrations – response spectrum representations; Relation between the nature of the ground motion and structural damage.
3. **Design approaches:** Methods of analysis – selection of analysis – equivalent lateral force procedure seismic base shear – seismic design co-efficient - vertical distribution of seismic forces and horizontal shear – twisting moment - Over turning moment – vertical seismic load and orthogonal effects lateral deflection – P-  $\Delta$  characteristics effect – soil structure Interaction  
Seismic – Graphs study, earthquake records for design – factors affecting Accelerogram characteristics - artificial Accelerogram – zoning map.  
Dynamic – analysis procedure: Model analysis – Inelastic – time history analysis  
Evaluation of the results.
- 4.. **Earthquake – Resistant design of structural Components and systems:**  
Introduction – monolithic reinforced – concrete structures – precast concrete structures – Prestressed concrete structures – steel structures – composite – structures, masonry structures – Timber structures.
5. **Fundamentals of seismic planning:** Selection of materials and types of construction form of superstructure – framing systems and seismic units – devices for reducing. Earthquake loads.

**TEXT / REFERENCE BOOKS:**

9. Earthquake Resistant Design by Pankaj Agarwal.

**Subject Code:15D12204**

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING)  
II – Semester**

**MANAGEMENT INFORMATION SYSTEMS  
ELECTIVE – IV**

- 1. Introduction to MIS** – Importance of information for management decisions – systems approach and information – System Development – Information System Architecture – Quantitative Techniques and Management Information Systems interfacing.
2. Physical design of computer sub-systems, database design, file design, input-output and procedure design and system security.
3. MIS development – process – system development – system life cycle method – Structured development method, and prototype method – Software development.
4. Information systems – Computers in Management – MIS office automations decision support system – Expert system.
5. Implementation, Evaluation and maintenance of MIS – pitfalls in MIS development. System modeling for MIS system engineering methodology for MIS problem solving.

**TEXT / REFERENCE BOOKS :**

6. C.S.V.Murthy – Management information systems Text & application
7. Himalaya Publishing house – Mumbai.
8. Gordan Davis – Management Information Systems, Mc Graw – hill Publishers.

**Subject Code:15D11210**

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING)**

**II – Semester**

**FRACTURE MECHANICS**

**ELECTIVE-IV**

**1. Summary of basic problems and concepts:**

Introduction - A crack in a structure - The stress at a crack tip - The Griffith criterion  
The crack opening displacement criterion - Crack Propagation - Closure

**2. The elastic crack – tip stress field :**

The Airy stress function - Complex stress functions - Solution to crack problems - The effect of finite size - Special cases - Elliptical cracks - Some useful expressions

**3. The crack tip plastic zone:**

The Irwin plastic zone correction - The Dugdale approach - The shape of the plastic zone  
- Plane stress versus plane strain - Plastic constraint factor - The thickness effect

**4. The energy principle:**

The energy release rate - The criterion for crack growth - The crack resistance (R curve) - Compliance , The J integral (Definitions only)

**Plane strain fracture toughness:**

The standard test - Size requirements - Non-Linearity – Applicability

**Plane stress and transitional behaviour:**

Introduction - An engineering concept of plane stress - The R curve concept

**5. The crack opening displacement criterion:**

Fracture beyond general yield - The crack tip opening displacement - The possible use of the CTOD criterion

**Determination of stress intensity factors:**

Introduction - Analytical and numerical methods - Finite element methods, Experimental methods (An Ariel views only)

**REFERENCES;**

1. Elementary engineering fracture mechanics - David Broek, Battelle, columbus laboratories, columbus, Ohio, USA
2. Fracture and Fatigue Control in Structures - john M.Barsom, Senior consultant United states Steel corporation & Stanley T.Rolfe, Ross H.Forney Professor of Engineering University of Kansas. &Stanley T.Rolfe, Ross H.forney Professor of Engineering, University of Kansas

**Subject Code:15D11206**

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING)**

**II- SEMESTER**

**ADVANCED CONCRETE TECHNOLOGY**

**ELECTIVE-IV**

1. **Cements and Admixtures:** Portland cement – Chemical composition - Hydration, setting and finenesses of cement – structures of hydrated cement – mechanical strength of cement gel - water held in hydrate cement paste – Heat of hydration of cement – Influence of compound composition on properties of cement – tests on physical properties of cement – I.S. specifications – Different types of cements – Admixtures.
2. **Aggregates:** Classification of aggregate – particle shape and texture – Bond strength and other mechanical properties of aggregate specific gravity, Bulk density, porosity, absorption and moisture in aggregate – soundness of aggregate – Alkali – aggregate reaction, Thermal properties – sieve analysis – Fineness modulus – grading curves – grading requirements – practical grading – Road note No.4 grading of fine and coarse aggregates gap graded aggregate – maximum aggregate size.
3. **Fresh concrete:** Workability – factors affecting workability – measurement of workability by different tests – Effect of time and temperature on workability – segregation and bleeding – mixing and vibration of concrete – quality of mixing water.  
**Hardened Concrete:** Water/cement ratio-Abram's law – Gel space ratio – effective water in mix – Nature of strength of concrete – strength in tension and compression-Griffith's hypothesis – factors affecting strength – autogeneous healing –Relation between compression and tensile strength – curing and maturity of concrete Influence of temperature on strength – Steam curing – testing of Hardened concrete – compression tests – tension tests – factors affecting strength – flexure tests – splitting tests – Non destructive testing methods.
4. **Elasticity, Shrinkage and Creep:** Modulus of elasticity – dynamic modulus of elasticity – poisson's ratio – Early volume changes – swelling – Drying shrinkage - Mechanism of shrinkage – factors affecting shrinkage – Differential shrinkage – moisture movement carbonation shrinkage-creep of concrete – factors influencing creep – relation between creep and time – Nature of creep – Effect of creep.
5. **Mix Design:** Proportioning of concrete mixes by various methods – fineness modulus, trial and error, mix density, Road Note. No. 4, ACI and ISI code methods – factors in the choice of mix proportions – Durability of concrete – quality control of concrete – Statistical methods – High strength concrete mix design. **Special concrete's:** Light weight concretes –light weight aggregate concrete- Mix design – Cellular concrete - No fines concrete – High density concrete – Fiber reinforced concrete – Different types of fibers - factories affecting properties of FRC – Applications polymer concrete – types of polymer concrete properties of polymer concrete applications

**TEXT/ REFERENCE BOOKS:**

1. Properties of Concrete by A.M.Neville – Pearson publication – 4th edition
2. Concrete Technology by M.S.Shetty. – S.Chand & Co. ; 2004
3. Design of Concrete Mix by Krishna Raju, CBS publishers.
4. Concrete: Micro structure, Properties and Materials – P.K.Mehta and J.M.Monteiro, McGraw Hill Publishers
5. Concrete Technology by A.R. Santha Kumar, Oxford university Press, New Delhi
6. Concrete Technology by A.M.Neville – Pearson publication
7. Concrete Technology by M.L. Gambhir. – Tata Mc. Graw Hill Publishers, New Delhi
8. Non-Destructive Test and Evaluation of materials by J.Prasad & C.G.K. Nair , Tata McGraw hill Publishers, New Delhi

**M.Tech (COMPUTER AIDED STRUCTURAL ENGINEERING)**

**II- SEMESTER**

**RESEARCH METHODOLOGY**

**(Audit Course)**

**(Audit Course For M.Tech. –II Semester Program from 2015 admitted batches onwards)**

**UNIT I**

Meaning of Research – Objectives of Research – Types of Research – Research Approaches – Guidelines for Selecting and Defining a Research Problem – research Design – Concepts related to Research Design – Basic Principles of Experimental Design.

**UNIT II**

Sampling Design – steps in Sampling Design –Characteristics of a Good Sample Design – Random Sampling Design.

Measurement and Scaling Techniques-Errors in Measurement – Tests of Sound Measurement – Scaling and Scale Construction Techniques – Time Series Analysis – Interpolation and Extrapolation.

Data Collection Methods – Primary Data – Secondary data – Questionnaire Survey and Interviews.

**UNIT III**

Correlation and Regression Analysis – Method of Least Squares – Regression vs Correlation – Correlation vs Determination – Types of Correlations and Their Applications

**UNIT IV**

Statistical Inference: Tests of Hypothesis – Parametric vs Non-parametric Tests – Hypothesis Testing Procedure – Sampling Theory – Sampling Distribution – Chi-square Test – Analysis of variance and Co-variance – Multi-variate Analysis.

## **UNIT V**

Report Writing and Professional Ethics: Interpretation of Data – Report Writing – Layout of a Research Paper – Techniques of Interpretation- Making Scientific Presentations in Conferences and Seminars – Professional Ethics in Research.

### **Text books:**

1. **Research Methodology:Methods and Techniques – C.R.Kothari, 2<sup>nd</sup> Edition,New Age International Publishers.**
2. **Research Methodology: A Step by Step Guide for Beginners- Ranjit Kumar, Sage Publications (Available as pdf on internet)**

Course Code	21D12101	MATRIX METHODS OF STRUCTURAL ANALYSIS	L	T	P	C
Semester	I		3	0	0	3
<b>Course Objectives:</b> This Course Will Enable Students:						
<ol style="list-style-type: none"> <li>1. To understand the static and kinematic indeterminacy of the structures</li> <li>2. To understand the concepts of matrix methods of analysis of structures</li> <li>3. To understand the analysis of continuous beams.</li> <li>4. To understand the analysis of rigid and pin jointed frames</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1. Distinguish determinate and indeterminate structures.</li> <li>2. Identify the method of analysis for indeterminate structures.</li> <li>3. Apply matrix methods of analysis for continuous beams.</li> <li>4. Apply matrix methods of analysis for rigid and pin jointed frames.</li> </ol>						
<b>UNIT - I</b>						<b>Lecture Hrs:10</b>
INTRODUCTION:-Indeterminacy-Determination of static and kinematic indeterminacies of two-dimensional and three-dimensional portal frames, pin jointed trusses and hybrid frames-coordinate systems –structural idealization. Introduction To Matrix Methods Of Analysis-Flexibility and stiffness matrices-Force displacement relationships for axial force, couple, torsional moments – stiffness method of analysis and flexibility method of analysis.						
<b>UNIT - II</b>						<b>Lecture Hrs:10</b>
ANALYSIS OF CONTINUOUS BEAMS- stiffness method and flexibility method of analysis –continuous beams of two and three spans with different end conditions internal hinges.						
<b>UNIT - III</b>						<b>Lecture Hrs:10</b>
ANALYSIS OF TWO DIMENSIONAL PORTAL FRAMES & PINJOINTED TRUSSES – stiffness and flexibility method of analysis of 2D portal frames with different end conditions-plotting of bending moment diagrams. Computation of joint displacement and member forces for pin jointed trusses.						
<b>UNIT - IV</b>						<b>Lecture Hrs:9</b>
TRANSFORMATION OF CO-ORDINATES - Local and Global co-ordinate systems-transformation of matrices from local to global coordinates of element stiffness matrix-direct stiffness method of analysis-assembly of global stiffness matrix from element stiffness matrices –static condensation-sub-structuring.						
<b>UNIT - V</b>						<b>Lecture Hrs:9</b>
EQUATION SOLVERS-solution of system of linear algebraic equations-direct inversion method-gauss elimination method-Cholesky method-banded equation solvers-frontal solution technique.						
<b>Textbooks:</b>						
<ol style="list-style-type: none"> <li>1. Matrix Analysis of Frames structures by William Weaver J.R and James M.Gere, CBS publications.</li> <li>2. Advanced Structural Analysis by Ashok.K.Jain, New Channel Brothers.</li> <li>3. Matrix method of Structural Analysis by Pandit &amp; Gupta</li> </ol>

Semester	I		3	0	0	3
<b>Course Objectives:</b> This Course Will Enable Students:						
<ol style="list-style-type: none"> <li>1. To study the properties of concrete making materials</li> <li>2. To do mix design</li> <li>3. Familiar with the methods of concrete</li> <li>4. Knowledge about advance tests on concrete</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1. To be familiar with the properties of concrete making materials</li> <li>2. Identify the influence and compatibility of chemical, mineral admixtures in concrete</li> <li>3. Update the knowledge on recent advances in special concretes.</li> <li>4. Know about various methods of concrete</li> <li>5. Analyse the performance of concrete structure through microstructure analysis</li> </ol>						
<b>UNIT - I</b>			<b>Lecture Hrs:10</b>			
<b>Cements and Admixtures:</b> Portland Cement – Chemical Composition - Hydration, Setting and Finenesses of Cement – Structures of Hydrated Cement – Mechanical Strength of Cement Gel - Water Held in Hydrate Cement Paste – Heat of Hydration of Cement – Influence of Compound Composition on Properties of Cement – Tests on Physical Properties of Cement – I.S. Specifications – Different Types of Cements – Admixtures						
<b>UNIT - II</b>			<b>Lecture Hrs:10</b>			
<b>Aggregates:</b> Classification of Aggregate – Particle Shape and Texture – Bond Strength and Other Mechanical Properties of Aggregate Specific Gravity, Bulk Density, Porosity, Absorption and Moisture in Aggregate – Soundness of Aggregate – Alkali – Aggregate Reaction, Thermal Properties – Sieve Analysis – Fineness Modulus – Grading Curves – Grading Requirements – Practical Grading – Road Note No.4 Grading of Fine and Coarse Aggregates Gap Graded Aggregate – Maximum Aggregate Size.						
<b>UNIT - III</b>			<b>Lecture Hrs:10</b>			
<b>Fresh Concrete:</b> Workability – Factors Affecting Workability – Measurement of Workability by Different Tests – Effect of Time and Temperature on Workability – Segregation and Bleeding – Mixing and Vibration of Concrete – Quality of Mixing Water. <b>Hardened Concrete:</b> Water/Cement Ratio-Abram’s Law – Gel Space Ratio – Effective Water in Mix – Nature of Strength of Concrete – Strength in Tension and Compression-Griffith’s Hypothesis – Factors Affecting Strength – Autogeneous Healing –Relation Between Compression and Tensile Strength – Curing and Maturity of Concrete Influence of Temperature on Strength – Steam Curing – Testing of Hardened Concrete – Compression Tests – Tension Tests – Factors Affecting Strength – Flexure Tests – Splitting Tests – Non Destructive Testing Methods.						
<b>UNIT - IV</b>			<b>Lecture Hrs:9</b>			
<b>Elasticity, Shrinkage and Creep:</b> Modulus of Elasticity – Dynamic Modulus of Elasticity – Poisson’s Ratio – Early Volume Changes – Swelling – Drying Shrinkage - Mechanism of Shrinkage – Factors Affecting Shrinkage – Differential Shrinkage – Moisture Movement Carbonation Shrinkage-Creep of Concrete – Factors Influencing Creep – Relation Between Creep and Time – Nature of Creep – Effect of Creep

Semester	I	(PE-I)	3	0	0	3
<b>Course Objectives:</b>						
<b>Course Outcomes (CO):</b> Student will be able to						
<b>UNIT - I</b>						<b>Lecture Hrs:</b>
Solution of Non-linear Equations: Newton-Raphson method, Von-mises formula, Chord's method, bisection method- Comparative study-solution of cubic equation and quartic equation. Numerical integration: Newton-Cotes integration formulas- Trapezoidal rule- Romberg Integration – Simpson's rule – Gaussian quadrature – Errors in integration formulas – Multiple integration with variable limits.						
<b>UNIT - II</b>						<b>Lecture Hrs:</b>
Solution of system of equations: Gauss elimination method- gauss-Jordan method- L-U decomposition – Errors in the solution- iterative methods – solution of sets of non linear equations. Boundary Value Problems and Characteristics – Value problems: Shooting method- solution through a set of equations – Derivative boundary conditions – characteristic value problems – Eigen values of matrix by iteration.						
<b>UNIT - III</b>						<b>Lecture Hrs:</b>
Numerical Solution of Elliptical partial differential Equations: Equilibrium temperatures in a heated slab-Equation of steady state heat flow – Laplace equation on rectangular region – Poisson equation –Derivative boundary conditions.						
<b>UNIT - IV</b>						<b>Lecture Hrs:</b>
Numerical Solution of parabolic partial Differential equations: Explicit Method- simple implicit method Crank- Nicolson method- Derivative boundary conditions – stability and convergence criteria - Equations in two dimensions.						
<b>UNIT - V</b>						<b>Lecture Hrs:</b>
Finite element method – weighted Residual methods, least square method, Galerkin's method – finite elements – Interpolating over the whole domain – Finite element application to boundary value problems.

Semester	I	(PE-I)	3	0	0	3
<b>Course Objectives:</b>						
<b>Course Outcomes (CO):</b> Student will be able to						
<b>UNIT - I</b>						<b>Lecture Hrs:</b>
Object oriented programming :- Procedure – oriented programming, object oriented programming paradigm, basic concepts of oop, benefits of opp. Basics of C++, key words, data types, operators, functions in C++, classes and objects. Concepts of C++:- Constructors, parameterized constructions, copy constructor, destructors, Inheritance – single, multilevel, multiple, Hierarchical, Hybrid, parameter passing methods.						
<b>UNIT - II</b>						<b>Lecture Hrs:</b>
Sorting: Bubble sort, selection sort, Insertion sort, Quick sort, Merge sort, Heap sort, Radix sort. Searching: Binary Search, Linear Search.						
<b>UNIT - III</b>						<b>Lecture Hrs:</b>
Linked Lists :- Single Linked List, Circular Linked List, Double Linked List, Circular Double Linked, insertion in to and deletion from linked list.						
<b>UNIT - IV</b>						<b>Lecture Hrs:</b>
Stacks:- Introduction, Implementation using arrays and linked lists, applications: Arithmetic Expression, Implementation of Recursion, Towers of Hanoi,. Queues: Introduction, Implementation using arrays and linked lists, Types of queues, Applications						
<b>UNIT - V</b>						<b>Lecture Hrs:</b>
Trees :- binary trees, representing binary trees in memory, Operations on Binary Trees, Types of trees

Course Code	21D11105	THEORY OF ELASTICITY			
Semester	I	(PE-I)			
		L	T	P	C
		3	0	0	3
<b>Course Objectives:</b> This Course Will Enable Students:					
<ol style="list-style-type: none"> <li>1. To make students understand the principles of elasticity.</li> <li>2. To familiarize students with basic equations of elasticity.</li> <li>3. To expose students to two dimensional problems in Cartesian and polar coordinates.</li> <li>4. To make students understand the principle of torsion of prismatic bars.</li> </ol>					
<b>Course Outcomes (CO):</b> Student will be able to					
<ol style="list-style-type: none"> <li>1. To apply elastic analysis to study the fracture mechanics.</li> <li>2. To apply linear elasticity in the design and analysis of structures such as beams, plates, shells and sandwich composites.</li> <li>3. To apply hyper elasticity to determine the response of elastomer-based objects.</li> <li>4. To analyze the structural sections subjected to torsion.</li> </ol>					
<b>UNIT - I</b>		<b>Lecture Hrs:10</b>			
<b>INTRODUCTION TO PLANE STRESS and PLANE STRAIN ANALYSIS:</b>					
Elasticity –Notation for Forces and Stresses-Components of Stresses –Components of Strain –Hooke’s Law. Plane Stress-Plane Strain-Differential Equations of Equilibrium- Boundary Conditions- Compatibility Equations-Stress Function-Boundary Conditions.					
<b>UNIT - II</b>		<b>Lecture Hrs:10</b>			
<b>TWO DIMENSIONAL PROBLEMS in RECTANGULAR COORDINATES:</b>					
Solution by Polynomials-Saint Venant’s Principle-Determination of Displacements-Bending of Simple Beams-Application of Fourier Series for Two Dimensional Problems - Gravity Loading.					
<b>UNIT - III</b>		<b>Lecture Hrs:10</b>			
<b>TWO DIMENSIONAL PROBLEMS in POLAR COORDINATES :</b>					
General Equation in Polar Co-Ordinates - Stress Distribution Symmetrical About An Axis – Pure Bending of Curved Bars- Strain Components in Polar Coordinates-Displacements for Symmetrical Stress Distributions-Simple Symmetric and Asymmetric Problems-General Solution of Two Dimensional Problem in Polar Coordinates-Application of The General Solution of Two Dimensional Problem in Polar Coordinates-Application of The General Solution in Polar Coordinates.					
<b>UNIT - IV</b>		<b>Lecture Hrs:9</b>			
<b>ANALYSIS OF STRESS AND STRAIN IN THREE DIMENSIONS:</b> Principle Stress - Ellipsoid and Stress-Director Surface-Determination of Principle Stresses- Maximum Shear Stresses-Homogeneous Deformation-Principle Axis of Strain Rotation.					
<b>General Theorems:</b> Balance Laws - Differential Equations of Equilibrium- Conditions of Compatibility - Determination of Displacement-Equations of Equilibrium in Terms of Displacements-Principle of Superposition-Uniqueness of Solution –The Reciprocal Theorem.					
<b>UNIT - V</b>		<b>Lecture Hrs:9</b>			
<b>TORSION OF PRISMATIC BARS:</b>					
Torsion of Prismatic Bars- Elliptical Cross Section-Other Elementary Solutions-Membrane Analogy-Torsion of Rectangular Bars-Solution of Torsional Problems by Energy Method-

Course Code	21D11106	EXPERIMENTAL STRESS ANALYSIS	L	T	P	C
Semester	I	(PE-II)	3	0	0	3
<b>Course Objectives:</b> This Course Will Enable Students:						
<ol style="list-style-type: none"> <li>1. To perform NDT test and interpret the results</li> <li>2. To understand the science behind working of strain gauge</li> <li>3. Understand the practical applications of strain gauge</li> <li>4. To determine the stress distribution in an acrylic block using the concept of photo-elasticity.</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1. To understand the mechanical properties of strain gauges and applications</li> <li>2. To understand the design and performance of strain gauges</li> <li>3. To understand the methods of Non-destructive testing</li> <li>4. To understand the methods of photo elasticity and models</li> </ol>						
<b>UNIT - I</b>						<b>Lecture Hrs: 10</b>
<b>PRINCIPLES OF EXPERIMENTAL APPROACH</b>						
Merits of Experimental Analysis Introduction, Uses of Experimental Stress Analysis Advantages of Experimental Stress Analysis, Different Methods –Simplification of Problems.						
<b>UNIT - II</b>						<b>Lecture Hrs: 10</b>
<b>STRAIN MEASUREMENT USING STRAIN GAUGES :-</b>						
Definition of Strain and Its Relation of Experimental Determinations Properties of Strain-Gauge Systems-Types of Strain Gauges –Mechanical, Acoustic and Optical Strain Gauges. Introduction To Electrical Strain Gauges - Inductance Strain Gauges – LVDT – Resistance Strain Gauges – Various Types –Gauge Factor – Materials of Adhesion Base.						
<b>UNIT - III</b>						<b>Lecture Hrs: 10</b>
<b>STRAIN ROSSETTES and NON – DESTRUCTIVE TESTING of CONCRETE:-</b>						
Introduction – The Three Elements Rectangular Rosette – The Delta Rosette Corrections for Transverse Strain Gauge. Ultrasonic Pulse Velocity Method –Application To Concrete. Hammer Test – Application To Concrete.						
<b>UNIT - IV</b>						<b>Lecture Hrs: 9</b>
<b>THEORY OF PHOTO ELASTICITY :-</b>						
Introduction –Temporary Double Refraction – The Stress Optic Law –Effects of Stressed Model in A Polariscope for Various Arrangements – Fringe Sharpening. Brewster’s Stress Optic Law.						
<b>UNIT - V</b>						<b>Lecture Hrs: 9</b>
<b>TWO DIMENSIONAL PHOTOELASTICITY :-</b>						
Introduction – Isochromatic Fringe Patterns- Isoclinic Fringe Patterns Passage of Light Through Plane Polariscope and Circular Polariscope Isoclinic Fringe Patterns – Compensation Techniques – Calibration Methods – Separation Methods – Scaling Model To Prototype Stresses – Materials for Photoelasticity- Properties of Photoelastic Materials.

Course Code	21D12104	MODELLING SIMULATION AND COMPUTER APPLICATIONS (PE-II)	L	T	P	C
Semester	I		3	0	0	3
<b>Course Objectives:</b> This course will enable students:						
<ol style="list-style-type: none"> <li>1. Define the basics of simulation modeling and replicating the practical situations in organizations</li> <li>2. Generate random numbers and random variates using different techniques.</li> <li>3. Develop simulation model using heuristic methods.</li> <li>4. Analysis of Simulation models using input analyzer, and output analyzer</li> <li>5. Explain Verification and Validation of simulation model.</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1. Describe the role of important elements of discrete event simulation and modeling paradigm.</li> <li>2. Conceptualize real world situations related to systems development decisions, originating from source requirements and goals.</li> <li>3. Develop skills to apply simulation software to construct and execute goal-driven system models.</li> <li>4. Interpret the model and apply the results to resolve critical issues in a real world environment.</li> </ol>						
<b>UNIT - I</b>			Lecture Hrs:10			
<b>SYSTEM MODELS:</b> Concepts, Continuous and Discrete Systems, System Modeling, Types of Models, Subsystems, Corporate Model, and System Study. <b>SYSTEM SIMULATION:</b> Techniques, Comparison of Simulation and Analytical Methods, Types of Simulation, Distributed Log Models, Cobweb Models.						
<b>UNIT - II</b>			Lecture Hrs:10			
<b>CONTINUOUS SYSTEM SIMULATION:</b> Numeric Solution of Differential Equations, Analog Computers, Hybrid Computers, Continuous System Simulation Languages CSMP, System Dynamic Growth Models, Logistic Curves.						
<b>UNIT - III</b>			Lecture Hrs:10			
<b>PROBABILITY CONCEPTS IN SIMULATION:</b> Monte Carlo Techniques, Stochastic Variables, Probability Functions, Random Number Generation Algorithms.						
<b>UNIT - IV</b>			Lecture Hrs:9			
<b>QUEUEING THEORY:</b> Arrival Pattern Distributions, Servicing Times, Queueing Disciplines, Measure of Queues, Mathematical Solutions to Queueing Problems. <b>DISCRETE SYSTEM SIMULATION:</b> Events, Generation of Arrival Patterns, Simulation Programming Tasks, Analysis of Simulation Output.						
<b>UNIT - V</b>			Lecture Hrs:9			
<b>GPSS &amp; SIMSCRIPT, PROGRAMMING GPSS:</b> Simulation Programming Techniques: Data Structures, Implementation of Activities, Events and Queues, Event Scanning, Simulation Algorithms in GPSS and SIMSCRIPT.

Course Code	21D12105	STRUCTURAL HEALTH MONITORING (PE-II)	L	T	P	C
Semester	I		3	0	0	3
<b>Course Objectives:</b> This course will enable students:						
<ol style="list-style-type: none"> <li>1. To understand the structural health monitoring for structures.</li> <li>2. To understand the conditional assessment &amp; techniques for strengthening and retrofitting of structures.</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1. Diagnose the distress in the structure by understanding the causes and factors</li> <li>2. Assess the health of structure using static field methods.</li> <li>3. Assess the health of structure using dynamic field tests</li> <li>4. Carryout repairs and rehabilitation measures of the structure</li> </ol>						
<b>UNIT - I</b>						<b>Lecture Hrs:10</b>
<b>Introduction to Structural Health Monitoring (SHM) :</b> Definition & Motivation for SHM, SHM - A Way for Smart Materials and Structures, SHM and Bio Mimetic - Analog Between The Nervous System of A Man and A Structure With SHM; SHM As A Part of System Management, Passive and Active SHM, NDE, SHM and NDECS, Basic Components of SHM, Materials for Sensor Design.						
<b>UNIT - II</b>						<b>Lecture Hrs:10</b>
<b>Application of SHM in Civil Engineering:</b> Introduction to Capacitive Methods, Capacitive Probe for Cover Concrete, SHM of A Bridge, Applications for External Post Tensioned Cables, Monitoring Historical Buildings.						
<b>UNIT - III</b>						<b>Lecture Hrs:10</b>
<b>Non Destructive Testing of Concrete Structures:</b> Introduction to NDT - Situations and Contexts, Where NDT Is Needed, Classification of NDT Procedures, Visual Inspection, Half-Cell Electrical Potential Methods, Schmidt Rebound Hammer Test, Resistivity Measurement, Electromagnetic Methods, Radiographic Testing, Ultrasonic Testing, Infra-Red Thermography, Ground Penetrating Radar, Radio Isotope Gauges, Other Methods..						
<b>UNIT - IV</b>						<b>Lecture Hrs:9</b>
<b>Condition Survey &amp; NDE of Concrete Structure:</b>						
<ol style="list-style-type: none"> <li>a) Definition and Objective of Condition Survey, Stages of Condition Survey (Preliminary, Planning, Inspection and Testing Stages)</li> <li>b) Possible Defects in Concrete Structures, Quality Control of Concrete Structures - Definition and Need, Quality Control Applications in Concrete Structures, NDT As An Option for Non-Destructive Evaluation (NDE) of Concrete Structures, Case Studies of A Few NDT Procedures On Concrete Structures.</li> </ol>						
<b>UNIT - V</b>						<b>Lecture Hrs:9</b>
<b>Rehabilitation and Retrofitting of Concrete Structure :</b>						
<ol style="list-style-type: none"> <li>a) Repair Rehabilitation &amp; Retrofitting of Structures, Damage Assessment of Concrete Structures, Materials and Methods for Repairs and Rehabilitation.</li> <li>b) Modeling of Repaired Composite Structure, Structural Analysis and Design - Importance of re-Analysis, Execution of Rehabilitation Strategy, Case Studies.</li> </ol>

Course Code	21D11109	RESEARCH METHODOLOGY AND IPR	L	T	P	C
Semester	I		2	0	0	2
<b>Course Objectives:</b> This Course Will Enable Students:						
<b>Course Outcomes (CO):</b> Student will be able to						
At the end of this course, students will be able to						
<ol style="list-style-type: none"> <li>1. Understand research problem formulation.</li> <li>2. Analyze research related information</li> <li>3. Follow research ethics</li> <li>4. Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.</li> <li>6. Understanding that when IPR would take such important place in growth of individuals &amp; nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general &amp; engineering in particular.</li> <li>7. Understand that IPR protection provides an incentive to inventors for further research work and investment in R &amp; D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.</li> </ol>						
UNIT - I			Lecture Hrs:			
Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations						
UNIT - II			Lecture Hrs:			
Effective literature studies approaches, analysis Plagiarism, Research ethics,						
UNIT - III			Lecture Hrs:			
Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee						
UNIT - IV			Lecture Hrs:			
Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.						
UNIT - V			Lecture Hrs:			
Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications. New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.						
<b>Textbooks:</b>						
<ol style="list-style-type: none"> <li>1. Structural Dynamics for Earthquake Engineering, A.K.Chopra, Pearson Publications</li> <li>2. Dynamics of Structures by Clough &amp; Penziem</li> <li>3. Structural Dynamics by Roy. R. Craig John Willy &amp; Sons.</li> </ol>

Course Code	21D11110	ENGLISH FOR RESEARCH PAPER	L	T	P	C
Semester	I	WRITING	2	0	0	0
<b>Course Objectives:</b> This Course Will Enable Students:						
<b>Course Outcomes (CO):</b> Student will be able to						
At the end of this course, students will be able to						
1. Understand that how to improve your writing skills and level of readability						
2. Learn about what to write in each section						
3. Understand the skills needed when writing a Title Ensure the good quality of paper at very first-time submission						
<b>UNIT - I</b>						<b>Lecture Hrs:</b>
Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness						
<b>UNIT - II</b>						<b>Lecture Hrs:</b>
Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticising, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts. Introduction 4						
<b>UNIT - III</b>						<b>Lecture Hrs:</b>
Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.						
<b>UNIT - IV</b>						<b>Lecture Hrs:</b>
Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature						
<b>UNIT - V</b>						<b>Lecture Hrs:</b>
Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions. useful phrases, how to ensure paper is as good as it could possibly be the first- time submission						
<b>Textbooks:</b>

Course Code	21D11111	VALUE EDUCATION	L	T	P	C
Semester	I		2	0	0	0
<b>Course Objectives:</b> This Course Will Enable Students:						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1. Understand value of education and self- development</li> <li>2. Imbibe good values in students</li> <li>3. Let the should know about the importance of character</li> </ol>						
<b>UNIT - I</b>			<b>Lecture Hrs:</b>			
Values and self-development –Social values and individual attitudes, Work ethics, Indian vision of humanism. Moral and non- moral valuation. Standards and principles.,Value judgements						
<b>UNIT - II</b>			<b>Lecture Hrs:</b>			
Importance of cultivation of values., Sense of duty. Devotion, Self-reliance. Confidence, Concentration, Truthfulness, Cleanliness. Honesty, Humanity. Power of faith, National Unity, Patriotism. Love for nature ,Discipline						
<b>UNIT - III</b>			<b>Lecture Hrs:</b>			
Personality and Behavior Development - Soul and Scientific attitude, Positive Thinking. Integrity and discipline. Punctuality, Love and Kindness. Avoid fault Thinking. Free from anger, Dignity of labour., Universal brotherhood and religious tolerance.						
<b>UNIT - IV</b>			<b>Lecture Hrs:</b>			
True friendship., Happiness Vs suffering, love for truth. Aware of self-destructive habits. Association and Cooperation. Doing best for saving nature						
<b>UNIT - V</b>			<b>Lecture Hrs:</b>			
Character and Competence –Holy books vs Blind faith. Self-management and Good health. Science of reincarnation. Equality, Nonviolence, Humility, Role of Women. All religions and same message. Mind your Mind, Self-control. Honesty, Studying effectively

Semester	I		2	0	0	0
<b>Course Objectives:</b> This Course Will Enable Students:						
1. Review existing evidence on the review topic to inform programme design and policy making undertaken by the DfID, other agencies and researchers.						
2. Identify critical evidence gaps to guide the development						
<b>Course Outcomes (CO):</b> Student will be able to						
<b>UNIT - I</b>						<b>Lecture Hrs:</b>
Introduction and Methodology, Aims and rationale, Policy background, Conceptual framework and terminology Theories of learning, Curriculum, Teacher education. Conceptual framework, Research questions, Overview of methodology and Searching.						
<b>UNIT - II</b>						<b>Lecture Hrs:</b>
Thematic overview: Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries. Curriculum, Teacher education.						
<b>UNIT - III</b>						<b>Lecture Hrs:</b>
Evidence on the effectiveness of pedagogical practices, Methodology for the in depth stage: quality assessment of included studies. How can teacher education (curriculum and practicum) and the school, curriculum and guidance materials best support effective pedagogy? Theory of change. Strength and nature of the body of evidence for effective pedagogical, practices. Pedagogic theory and pedagogical approaches. Teachers' attitudes and beliefs and Pedagogic strategies						
<b>UNIT - IV</b>						<b>Lecture Hrs:</b>
Professional development: alignment with classroom practices and followup support Peer support Support from the head teacher and the community. Curriculum and assessment Barriers to learning: limited resources and large class sizes						
<b>UNIT - V</b>						<b>Lecture Hrs:</b>
Research gaps and future directions Research design Contexts Pedagogy Teacher education Curriculum and assessment Dissemination and research impact.

Course Code	21D11113	ADVANCED CONCRETE LABORATORY – I	L	T	P	C
Semester	I		0	0	4	2
<b>Course Objectives:</b>						
1. Mix design and Fresh Properties of Fly ash. 2. Compression Strength and Split Tensile Strength. 3. Mix design and Fresh Properties of GGBS. 4. Flexural Strength Properties of Metakaolin						
<b>Course Outcomes (CO):</b>						
1. To gain knowledge Mix design and Fresh Properties of Fly ash. 2. To gain knowledge Compression Strength and Split Tensile Strength. 3. To gain knowledge Mix design and Fresh Properties of GGBS. 4. To gain knowledge Flexural Strength Properties of Metakaolin						
<b>List of Experiments:</b>						
1. Mix design and Fresh Properties of Fly ash based M40 Grade Concrete. 2. Compression Strength and Split Tensile Strength Properties of Fly ash based M40 Grade Concrete. 3. Flexural Strength Properties of Fly ash based M40 Grade Concrete. 4. Mix design and Fresh Properties of GGBS based M40 Grade Concrete. 5. Compression Strength and Split Tensile Strength Properties of GGBS based M40 Grade Concrete. 6. Flexural Strength Properties of GGBS based M40 Grade Concrete. 7. Mix design and Fresh Properties of Silica Fume based M40 Grade Concrete. 8. Compression Strength and Split Tensile Strength Properties of Silica Fume based M40 Grade Concrete. 9. Flexural Strength Properties of Silica Fume based M40 Grade Concrete. 10. Mix design and Fresh Properties of Metakaolin based M40 Grade Concrete. 11. Compression Strength and Split Tensile Strength Properties of Metakaolin based M40 Grade Concrete. 12. Flexural Strength Properties of Metakaolin based M40 Grade Concrete.

Course Code	21D11114	COMPUTER AIDED DESIGN	L	T	P	C
Semester	I	LABORATORY - I	0	0	4	2
<b>Course Objectives:</b> The students will acquire knowledge about						
<ol style="list-style-type: none"><li>1. Demonstrate the design of reinforced concrete structural elements.</li><li>2. Explain earthquake resistant design</li><li>3. Explain analysis of a building for wind loading.</li><li>4. Demonstrate the method of analysis of truss.</li></ol>						
<b>Course Outcomes (CO):</b> At the end of the course, students will be able to:						
<ol style="list-style-type: none"><li>2. Analyze and design the structural components like beams, slabs and columns,</li><li>3. Analyze and design retaining wall and shear wall.</li><li>4. Analyze for earthquake loading &amp; wind loading of framed buildings.</li><li>5. Analyze and design pin jointed, rigid jointed plane structures.</li></ol>						
<b>List of Experiments:</b>						
<ol style="list-style-type: none"><li>1. Design of Singly reinforced concrete beam</li><li>2. Design of Doubly reinforced concrete beam</li><li>3. Design of reinforced concrete column subjected to biaxial bending</li><li>4. Design of One Way reinforced concrete slab</li><li>5. Design of Two Way reinforced concrete slab</li><li>6. Design of reinforced concrete retaining wall (cantilever type)</li><li>7. Design of reinforced concrete shear wall</li><li>8. Lateral forces on a building due to an earthquake using equivalent static method</li><li>9. Lateral forces on a building due to wind</li><li>10. Analysis of rigid jointed plane frames</li><li>11. Analysis of simply supported/cantilever beam</li><li>12. Analysis of plane truss and Design of Steel Tension Members.</li></ol>

Course Code	21D11201	<b>STRUCTURAL DYNAMICS</b>	L	T	P	C
Semester	II		3	0	0	3
<b>Course Objectives:</b> This Course Will Enable Students:						
2. Determine vibration characteristics of structures like frequency, amplitude, impedance and time period 3. Differentiate the response of single and multi-degree of freedom systems 4. Determine the response of structures for pulse excitation like blast load 5. Differentiate the response of Multi Degree of Freedom systems						
<b>Course Outcomes (CO):</b> Student will be able to						
1. Write equation of motion for single and multi-degree of freedom systems 2. Understand the impact of damping on characteristics of vibrating system 3. Gain Knowledge about arbitrary and pulse excitation 4. Understand applications of Numerical methods in dynamics 5. Analyze in various theories of failure and plasticity						
<b>UNIT - I</b>						<b>Lecture Hrs:10</b>
<b>Theory of Vibrations:</b> Introduction –Elements of A Vibratory System – Degrees of Freedom-Continuous Systems –Lumped Mass Idealization –Oscillatory Motion –Simple Harmonic Motion –Pictorial Representation of S.H.M - Free Vibrations of Single Degree of Freedom (SDOF) Systems – Undamped and Damped –Critical Damping –Logarithmic Decrement –Forced Vibrations of SDOF Systems-Harmonic Excitation –Dynamic Magnification Factor- Bandwidth. Fundamental Objective of Dynamic Analysis-Types of Prescribed Loading- Methods of Discretization- Formulation of The Equations of Motion.						
<b>UNIT - II</b>						<b>Lecture Hrs:10</b>
<b>Single Degree of Freedom System:</b> Formulation and Solutions of The Equation of Motion - Free Vibration Response –Response To Harmonic, Periodic, Impulsive and General Dynamic Loading –Duhamel Integral						
<b>UNIT - III</b>						<b>Lecture Hrs:10</b>
<b>Multi Degree of Freedom System:</b> Selection of The Degree of Freedom –Evaluation of Structural Property Matrices-Formulation of The MDOF Equations of Motion –Undamped Free Vibrations-Solution of Eigen Value Problem for Natural Frequencies and Mode Shapes- Analysis of Dynamic Response –Normal Coordinates –Uncoupled Equations of Motion –Orthogonal Properties of Normal Modes-Mode Superposition Procedure						
<b>UNIT - IV</b>						<b>Lecture Hrs:9</b>
<b>Practical Vibration Analysis:</b> Stodola Method- Fundamental Mode Analysis –Analysis of Second and Higher Modes –Holzer’s Method –Basic Procedure –Transfer Matrix Procedure						
<b>UNIT - V</b>						<b>Lecture Hrs: 9</b>
<b>Introduction To Earthquake Analysis:</b> Introduction –Excitation by Rigid Base Translation –Lumped Mass Approach -SDOF and MDOF System- I.S Code Methods of Analysis.						
<b>Continuous System:</b> Introduction –Flexural Vibrations of Beams- Elementary Case-Equation of Motion –Analysis of Undamped Free Shapes of Simple Beams With Different End Conditions-Principles of Application To Continuous Beams.

Course Code	21D12201	<b>FINITE ELEMENT ANALYSIS</b>	L	T	P	C
Semester	II		3	0	0	3
<b>Course Objectives:</b> This Course Will Enable Students:						
<ol style="list-style-type: none"> <li>To provide an overview and basic fundamentals of Finite Element Analysis.</li> <li>To introduce basic aspects of finite element theory, including domain discretization, interpolation, application of boundary conditions, assembly of global arrays, and solution of the resulting algebraic systems.</li> <li>To explain the underlying concepts behind variational methods and weighted residual methods in FEM.</li> <li>Formulate simple structural problems in to finite elements</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>Analyse and build FEA models for various Engineering problems.</li> <li>Able to identify information requirements and sources for analysis , design and evaluation</li> <li>Use professional-level finite element software to solve engineering problems.</li> <li>Interpret results obtained from FEA software solutions, not only in terms of conclusions but also awareness of limitations.</li> </ol>						
<b>UNIT - I</b>			<b>Lecture Hrs:10</b>			
<b>Introduction</b> -Concepts of FEM –Steps Involved –Merits &Demerits –Energy Principles –Discretization –Rayleigh –Ritz Method of Functional Approximation. <b>Elastic Formulations:</b> Stress Equations-Strain Displacement Relationships in Matrix Form-Plane Stress, Plane Strain and Axi-Symmetric Bodies of Revolution With Axi Symmetric Loading						
<b>UNIT - II</b>			<b>Lecture Hrs:10</b>			
<b>UNIT - III</b>			<b>Lecture Hrs:10</b>			
<b>Two Dimensional FEM</b> -Different Types of Elements for Plane Stress and Plane Strain Analysis –Displacement Models –Generalized Coordinates-Shape Functions-Convergent and Compatibility Requirements –Geometric Invariance –Natural Coordinate System-Area and Volume Coordinates-Generation of Element Stiffness and Nodal Load Matrices –Static Condensation.						
<b>UNIT - IV</b>			<b>Lecture Hrs:9</b>			
<b>Isoparametric Formulation</b> -Concept, Different Isoparametric Elements for 2D Analysis-Formulation of 4-Noded and 8-Noded Isoparametric Quadrilateral Elements –Lagrangian Elements-Serendipity Elements. <b>Axi Symmetric Analysis</b> –Bodies of Revolution-Axi Symmetric Modelling –Strain Displacement Relationship-Formulation of Axi Symmetric Elements.						
<b>UNIT - V</b>			<b>Lecture Hrs:9</b>			
<b>Three Dimensional FEM</b> -Different 3-D Elements, 3D Strain –Displacement Relationship-Formulation of Hexahedral and Isoparametric Solid Element.

Course Code	21D11204	DESIGN OF PRESTRESSED CONCRETE (PE-III)	L	T	P	C
Semester	II			3	0	0
<b>Course Objectives:</b> This Course Will Enable Students:						
<ol style="list-style-type: none"> <li>1. Familiarize students with concept of prestressing and analysis of prestress</li> <li>2. Design and analysis of pretension and post tensioned concrete members</li> <li>3. Determination of deflections of prestressed members</li> <li>4. To calculate the losses of prestress, creep and shrinkage.</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1. To understand the basic concepts about prestressed concrete and analysis of prestress</li> <li>2. Estimate the effective losses in prestress</li> <li>3. Analyse the effect of prestressing force in the behaviour of beams in flexure</li> <li>4. To design shear, torsion and transmission length in prestressed concrete members</li> <li>5. Design of compression and tension members as per codes of practice</li> </ol>						
<b>UNIT - I</b>			<b>Lecture Hrs:10</b>			
<b>Introduction:</b> Development of Prestressed Concrete –Advantages and Disadvantages of PSC Over RCC –General Principles of Pre-Stressing-Pre Tensioning and Post Tensioning – Materials Used in PSC-High Strength Concrete –High Tension Steel-Different Types /Methods/Systems of Prestressing. Analysis of Sections for Flexure in Accordance With Elastic Theory-Allowable Stresses-Design Criteria As Per I.S Code of Practice –Elastic Design of Beams (Rectangular, I and T Sections) for Flexure –Introduction To Partial Prestressing						
<b>UNIT - II</b>			<b>Lecture Hrs:10</b>			
<b>Losses of Prestress:</b> Estimation of The Loss of Prestress Due To Various Causes Like Elastic Shortening of Concrete ,Creep of Concrete, Shrinkage of Concrete, Relaxation of Steel, Slip in Anchorage and Friction						
<b>UNIT - III</b>			<b>Lecture Hrs:10</b>			
<b>Deflections:</b> Introduction-Factors Influencing Deflections-Short Term and Long Term Deflections of Un-cracked members- Short Term and Long Term Deflections of Cracked Members. <b>Shear:</b> Shear in PSC Beams –Principal Stresses –Conventional Elastic Design for Shear-Transfer of Prestress in Pre-tensioned Members						
<b>UNIT - IV</b>			<b>Lecture Hrs:10</b>			
<b>End blocks:</b> Transmission length –Bond stresses-bearing at anchorage –Anchorage zone stresses in post-tensioned members-Analysis and design of end blocks by Guyon, Magnel and approximate methods –Anchorage zone reinforcements.						
<b>UNIT - V</b>			<b>Lecture Hrs:10</b>			
<b>Statically Indeterminate Structures:</b> Introduction –Advantages and Disadvantages of Continuity –Layouts for Continuous Beams-Primary and Secondary Moments –Elastic Analysis of Continuous Beams-Linear Transformation-Concordant Cable Profile-Design of Continuous Beams

Course Code	21D12203	RELIABILITY BASED ENGINEERING DESIGN (PE-III)	L	T	P	C
Semester	II		3	0	0	3
<b>Course Objectives:</b> This course will enable students:						
<ol style="list-style-type: none"> <li>1. Demonstrate the approaches and techniques to assess and improve process and/or product quality and reliability.</li> <li>2. Introduce the principles and techniques of Statistical Quality Control and their practical uses in product and/or process design and monitoring</li> <li>3. Illustrate the basic concepts and techniques of modern reliability engineering tools.</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1. Attain the basic techniques of quality improvement, fundamental knowledge of statistics and probability</li> <li>2. Use control charts to analyze for improving the process quality.</li> <li>3. Describe different sampling plans</li> <li>4. Acquire basic knowledge of total quality management</li> <li>5. Understand the concepts of reliability and maintainability</li> </ol>						
<b>UNIT - I</b>						<b>Lecture Hrs:10</b>
Basic Statistics and Probability – Concepts of Structural Safety – Resistance Parameters and Distributions. Probabilistic Analysis of Loads Live Load & Wind Load						
<b>UNIT - II</b>						<b>Lecture Hrs:10</b>
Determination of Reliability, Monte Carlo Study of Structural Safety.						
<b>UNIT - III</b>						<b>Lecture Hrs:10</b>
Levels of Reliability Methods and Their Suitable Adoption in Structural Engineering Elements.						
<b>UNIT - IV</b>						<b>Lecture Hrs:9</b>
<b>UNIT - V</b>						<b>Lecture Hrs:9</b>
Reliability Analysis of Structural Components – Reliability Based Design Determination of Partial Safety Factors, Code Calibration – Reliability of Structural Systems Application to Steel & Concrete Structures, Off Shore Structures.						
<b>Textbooks:</b>						
<ol style="list-style-type: none"> <li>1. Structural Reliability Theory and Its Application Springer – Palle Thoft Christensen and M.J.Baker – Verlag, Berlin Haiderberg, Newyork 1982.</li> <li>2. Course Code	21D11206	STABILITY OF STRUCTURES	L	T	P	C
Semester	II	(PE-IV)	3	0	0	3
<b>Course Objectives:</b> This Course Will Enable Students:						
<ol style="list-style-type: none"> <li>1. Determine stability of columns and frames</li> <li>2. Determine stability of beams and plates</li> <li>3. Use stability criteria and concepts for analyzing discrete and continuous systems,</li> <li>4. To form differential equations for plate buckling</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1. Apply the torsional buckling and plates for buckling concept</li> <li>2. Apply the inelastic behaviour of materials and analyse the inelastic character of column</li> <li>3. Analyse the frame structures</li> <li>4. Analyse the plate structures</li> </ol>						
<b>UNIT - I</b>						<b>Lecture Hrs:10</b>
<b>Formulations Related To Beam Columns :</b> Concept of Stability, Differential Equation for Beam Columns –Beam Column With Concentrated Loads –Continuous Lateral Load – Couples -Beam Column With Built in Ends –Continuous Beams With Axial Load – Application of Trigonometric Series –Determination of Allowable Stresses.						
<b>UNIT - II</b>						<b>Lecture Hrs:10</b>
<b>Elastic Buckling of Bars:</b> Elastic Buckling of Straight Columns –Effect of Shear Stress on Buckling-Eccentrically and Laterally Loaded Columns –Energy Methods –Buckling of A Bar on Elastic Foundation, Buckling of A Bar With Intermediate Compressive Forces and Distributed Axial Loads –Buckling of Bars With Change in Cross Section –Effect of Shear Force on Critical Load –Built Up Columns						
<b>UNIT - III</b>						<b>Lecture Hrs:10</b>
<b>Inelastic Buckling and Torsional Buckling :</b> Buckling of Straight Bars-Double Modulus Theory –Tangent Modulus Theory. Pure Torsion of Thin Walled Bar of Open Cross Section-Non –Uniform Torsion of Thin Walled Bars of Open Cross Section-Torsional Buckling – Buckling Under Torsion and Flexure.						
<b>UNIT - IV</b>						<b>Lecture Hrs:9</b>
<b>Mathematical Treatment of Stability Problems:</b> Buckling Problem Orthogonality Relation –Ritz Method-Timoshenko Method, Galerkin Method						
<b>UNIT - V</b>						<b>Lecture Hrs:9</b>
<b>Lateral Buckling of Simply Supported Beams and Rectangular Plates:</b> Beams of Rectangular Cross Section Subjected for Pure Bending. Derivation of Equation of Rectangular Plate Subjected To Constant Compression in Two Directions and One Direction.						
<b>Textbooks:</b>						
<ol style="list-style-type: none"> <li>1. Stability of Metallic Structure by Bleich –Mc Graw Hill</li> <li>2. Theory of Beam Columns Vol I by Chen &amp; Atsuta Mc.Graw Hill</li> <li>3. Theory of Elastic Stability, Timoshenko, S., and Gere., Mc Graw Hill Book Company, 1973.</li> </ol>

<b>Course Code</b>	<b>21D11207</b>	<b>ADVANCED STEEL DESIGN</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>Semester</b>	<b>II</b>	<b>(PE-IV)</b>	<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**Course Objectives:** This Course Will Enable Students:

1. To introduce structural steel fasteners like welding and bolting
2. To introduce steel structures and its basic components like eccentric and moment connections
3. To introduce the structural steel components of industrial building.
4. To introduce tension members, compression members, beams and beam-columns
5. To introduce the fundamental of steel structures and calculate the plastic moment of different cross-sections

**Course Outcomes (CO):** Student will be able to

1. Learn the fundamentals of structural steel fasteners
2. Learn the basic elements of a steel structure
3. Classify and design the structural steel components of industrial building.
4. Able to design tension members, compression members, beams and beam-columns
5. Explain the fundamental of steel structures and calculate the plastic moment of different cross-sections.

<b>UNIT - I</b>		<b>Lecture Hrs:10</b>
-----------------	--	-----------------------

**SIMPLE CONNECTIONS – RIVETED, BOLTED PINNED AND WELDED CONNECTIONS :** Riveted Connections – Bolted Connections –Load Transfer Mechanism – Failure of Bolted Joints – Specifications for Bolted Joints – Bearing – Type Connections – Tensile Strength of Plate – Strength and Efficiency of the Joint – Combined Shear and Tension – Slip-Critical connections – Prying Action – Combined Shear and Tension for Slip-Critical Connections. Design of Groove Welds - Design of Fillet Welds – Design of Intermittent Fillet Welds – Failure of Welds.

<b>UNIT - II</b>		<b>Lecture Hrs:10</b>
------------------	--	-----------------------

**ECCENTRIC AND MOMENT CONNECTIONS :** Introduction – Beams – Column Connections – Connections Subjected to Eccentric Shear – Bolted Framed Connections – Bolted Seat Connections – Bolted Bracket Connections. Bolted Moment Connections – Welded Framed Connections- Welded Bracket Connections – Moment Resistant Connections.

<b>UNIT - III</b>		<b>Lecture Hrs:10</b>
-------------------	--	-----------------------

**ANALYSIS AND DESIGN OF INDUSTRIAL BUILDINGS:**  
 Dead loads, live loads and wind loads on roofs. Design wind speed and pressure, wind pressure on roofs; wind effect on cladding and louvers; Design of angular roof truss, tubular truss, truss for a railway platform. Design of purlins for roofs, design of built up purlins, and design of knee braced trusses and stanchions. Design of bracings.

<b>UNIT - IV</b>		<b>Lecture Hrs:9</b>
------------------	--	----------------------

**Design of steel truss girder bridges:**

Types of truss bridges, component parts of a truss bridge, economic Proportions of trusses, self-weight of truss girders, design of bridge Compression members, tension members; wind load on truss girder Bridges; wind effect on top lateral bracing; bottom lateral bracing; portal Bracing; sway bracing Design of Lacing.

Course Code	21D12204	ARTIFICIAL NEURAL NETWORKS	L	T	P	C
Semester	II	(PE-IV)	3	0	0	3
<b>Course Objectives:</b> This course will enable students:						
<ol style="list-style-type: none"> <li>1. Define what is Neural Network and model a Neuron and Express both Artificial Intelligence and Neural Network</li> <li>2. Analyze ANN learning, Error correction learning, Memory-based learning, Hebbian learning, Competitive learning and Boltzmann learning</li> <li>3. Implement Simple perception, Perception learning algorithm, Modified Perception learning algorithm, and Adaptive linear combiner, Continuous perception, learning in continuous perception.</li> <li>4. Analyze the limitation of Single layer Perceptron and Develop MLP with 2 hidden layers, Develop Delta learning rule of the output layer and Multilayer feed forward neural network with continuous perceptions.</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1. Model Neuron and Neural Network, and to analyze ANN learning, and its applications</li> <li>2. Perform Pattern Recognition, Linear classification.</li> <li>3. Develop different single layer/multiple layer Perception learning algorithms</li> <li>4. Design of another class of layered networks using deep learning principles</li> </ol>						
<b>UNIT - I</b>						<b>Lecture Hrs:10</b>
<b>INTRODUCTION:</b> History of Neural Networks, Structure and Functions of Biological and Artificial Neuron, Neural Network Architectures, and Characteristics of Ann, Applications, and Basic Learning Rules: Hibbing Learning, Competitive Learning, and Boltzmann Learning.						
<b>UNIT - II</b>						<b>Lecture Hrs:10</b>
<b>SUPERVISED LEARNING-1:</b> Single Layer Neural Network and Architecture, Mcculloch-Pitts Neuron Model, Perception Model, Perception Convergence Theorem, Adaline, Delta Learning Rule.						
<b>SUPERVISED LEARNING-2:</b> Multi-Layer Neural Network and Architecture, Madaline, Back Propagation Learning, Back Propagation Algorithm						
<b>UNIT - III</b>						<b>Lecture Hrs:10</b>
<b>UNSUPERVISED LEARNING-1:</b> Kohonen Self Organization Networks, Hamming Network and Maxnet, Learning Vector Quantization, Mexican Hat.						
<b>UNSUPERVISED LEARNING-2:</b> CounterPropagation Network, Forward Only Counter Propagation Network, Adaptive Resonance Theory (Art) -Architecture, Algorithms.						
<b>UNIT - IV</b>						<b>Lecture Hrs:9</b>
<b>ASSOCIATIVE MEMORY NETWORKS :</b> Introduction, Auto Associative Memory ,Hetero Associative Memory, Bidirectional Associative Memory(BAM) -Theory and Architecture, BAM Training Algorithm-Storage.						
<b>UNIT - V</b>						<b>Lecture Hrs:9</b>
<b>HOPFIELD NETWORK:</b> Introduction, Architecture of Hopfield Network, Discrete and Continuous Hopfield Network, Iterative Auto Associative Memory Network (Linear Auto Associative Memory, Brain-In-The-Box Network), Temporal Associative Memory Architecture.

Course Code		<b>DISASTER MANAGEMENT</b>	L	T	P	C
Semester	II		2	0	0	0
<b>Course Objectives:</b> Students will be able to:						
1. Learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.						
2. Critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.						
3. Develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.						
4. Critically understand the strengths and weaknesses of disaster management approaches, planning and programming in different countries, particularly their home country or the countries they work in						
<b>Course Outcomes (CO):</b> Student will be able to						
<b>UNIT - I</b>	<b>Introduction</b>	<b>Lecture Hrs: 04</b>				
Disaster: Definition, Factors And Significance; Difference Between Hazard And Disaster; Natural And Manmade Disasters: Difference, Nature, Types And Magnitude.						
<b>UNIT – II</b>	<b>Repercussions Of Disasters And Hazards</b>	<b>Lecture Hrs: 04</b>				
Economic Damage, Loss Of Human And Animal Life, Destruction Of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts And Famines, Landslides And Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks Of Disease And Epidemics, War And Conflicts.						
<b>UNIT – III</b>	<b>Disaster Prone Areas In India</b>	<b>Lecture Hrs: 04</b>				
Study Of Seismic Zones; Areas Prone To Floods And Droughts, Landslides And Avalanches; Areas Prone To Cyclonic And Coastal Hazards With Special Reference To Tsunami; Post-Disaster Diseases And Epidemics.						
<b>UNIT – IV</b>	<b>Disaster Preparedness And Management Preparedness:</b>	<b>Lecture Hrs: 04</b>				
Monitoring Of Phenomena Triggering A Disaster Or Hazard; Evaluation Of Risk: Application Of Remote Sensing, Data From Meteorological And Other Agencies, Media Reports: Governmental And Community Preparedness.						
<b>UNIT – V</b>	<b>Risk Assessment Disaster Risk:</b>	<b>Lecture Hrs: 04</b>				
Concept And Elements, Disaster Risk Reduction, Global And National Disaster Risk Situation. Techniques Of Risk Assessment, Global Co-Operation In Risk Assessment And Warning, People’s Participation In Risk Assessment. Strategies for Survival.						
<b>UNIT – VI</b>		<b>Lecture Hrs: 04</b>				
Disaster Mitigation Meaning, Concept And Strategies Of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation And Non-Structural Mitigation, Programs Of Disaster Mitigation In India.						
<b>Suggested Readings::</b>						
1. R. Nishith, Singh AK, “Disaster Management in India: Perspectives, issues and strategies “New Royal book Company.						
2. Sahni, Pardeep, et.al. (Eds.), “Disaster Mitigation Experiences And Reflections”, Prentice Hall Of India, New Delhi.						
3. Goel S. L. Disaster Administration and Management Text And Case Studies”, Deep & Deep Publication Pvt. Ltd., New Delhi.

Course Code		CONSTITUTION OF INDIA	L	T	P	C
Semester	II		2	0	0	0
<b>Course Objectives:</b> Students will be able to:						
1. Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.						
2. To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism.						
3. To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.						
<b>Course Outcomes (CO):</b> Student will be able to						
1. Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.						
2. Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.						
3. Discuss the circumstances surrounding the foundation of the Congress Socialist Party (CSP) under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.						
4. Discuss the passage of the Hindu Code Bill of 1956.						
<b>UNIT - I</b>			<b>Lecture Hrs: 04</b>			
History of Making of the Indian Constitution: History Drafting Committee, (Composition & Working); Philosophy of the Indian Constitution: Preamble Salient Features						
<b>UNIT – II</b>			<b>Lecture Hrs: 04</b>			
Contours of Constitutional Rights & Duties: Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties						
<b>UNIT – III</b>			<b>Lecture Hrs: 04</b>			
Organs of Governance, Parliament Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions.						
<b>UNIT – IV</b>			<b>Lecture Hrs: 04</b>			
Local Administration: District's Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation. Pachayati raj: Introduction, PRI: ZilaPachayat. Elected officials and their roles, CEO ZilaPachayat: Position and role. Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy.						
<b>UNIT – V</b>			<b>Lecture Hrs: 04</b>			
Election Commission: Election Commission: Role and Functioning. Chief Election Commissioner and Election Commissioners. State Election Commission: Role and Functioning. Institute and Bodies for the welfare of SC/ST/OBC and women.						
<b>Suggested Readings::</b>						
1. The Constitution of India, 1950 (Bare Act), Government Publication.						
2. Dr. S. N. Busi, Dr. B. R. Ambedkar framing of Indian Constitution, 1st Edition, 2015.						
3. M. P. Jain, Indian Constitution Law, 7th Edn., Lexis Nexis, 2014.						
4. D.D. Basu, Introduction to the Constitution of India, Lexis Nexis, 2015.

Course Code		STRESS MANAGEMENT BY YOGA	L	T	P	C
Semester	II		2	0	0	0
<b>Course Objectives:</b> Students will be able to:						
1. To achieve overall health of body and mind 2. To overcome stress						
<b>Course Outcomes (CO):</b> Student will be able to						
1. Develop healthy mind in a healthy body thus improving social health also 2. Improve efficiency						
<b>UNIT - I</b>			<b>Lecture Hrs: 04</b>			
Definitions of Eight parts of yog. (Ashtanga)						
<b>UNIT – II</b>			<b>Lecture Hrs: 04</b>			
Yam and Niyam: Do`s and Don`ts in life, Ahinsa, satya, astheya, bramhacharya and aparigraha						
<b>UNIT – III</b>			<b>Lecture Hrs: 04</b>			
Yam and Niyam: Do`s and Don`ts in life, Shaucha, santosh, tapa, swadhyay, ishwarpranidhan						
<b>UNIT – IV</b>			<b>Lecture Hrs: 04</b>			
Asan and Pranayam: Various yog poses and their benefits for mind & body						
<b>UNIT – V</b>			<b>Lecture Hrs: 04</b>			
Asan and Pranayam: Regularization of breathing techniques and its effects-Types of pranayam						
<b>Suggested Readings::</b>						
1. ‘Yogic Asanas for Group Training-Part-I’ : Janardan Swami Yogabhyasi Mandal, Nagpur 2. “Rajayoga or conquering the Internal Nature” by Swami Vivekananda, Advaita Ashrama (Publication Department), Kolkata

Course Code	21D12301	OPTIMIZATION IN STRUCTURAL DESIGN (PE-V)	L	T	P	C
Semester	III		3	0	0	3
<b>Course Objectives:</b> This course will enable students:						
<ol style="list-style-type: none"> <li>1. Learn the different optimization methodologies applied to structural systems and linear optimization.</li> <li>2. Understand the dynamic programming, decision theory and simulations.</li> <li>3. Assess the different optimization methodologies applied to structural systems</li> <li>4. To apply optimum principles to achieve economical structural systems.</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1. Explain the requirement of optimization specific to structural systems.</li> <li>2. Enumerate the various conventional techniques available for structural optimization.</li> <li>3. Explain about various programming techniques adapted for structural optimization.</li> <li>4. Illustrate the design optimization for Reinforced concrete structures.</li> <li>5. Illustrate the design optimization for Reinforced concrete beams.</li> </ol>						
<b>UNIT - I</b>			Lecture Hrs:10			
System Approach – Techniques of Operation Research – Decision Making – Research Models. Basic Concepts of Minimum Weight, Minimum Cost Design, Variables, Constrains, Model and Model Building, Objective Function, Classical Methods.						
<b>UNIT - II</b>			Lecture Hrs:10			
Concept of Liner Programming, Integer Programming, Quadratic Programming, Dynamic Programming and Geometric Programming Methods for Optimal Design of Structural Elements. Linear Programming: Standard Form of Linear Programming Problem, Geometry of Linear Programming Problem. Solution of System of Linear Simultaneous Equations. Application of Linear Programming Methods for Plastic Design of Frames Computer Search Methods of Univariate and Multivariate Minimization.						
<b>UNIT - III</b>			Lecture Hrs:10			
Simplex Method. – Revised Simplex Method, Duality of Linear Programming Sensitivity Or Post Optimality Analysis						
<b>UNIT - IV</b>			Lecture Hrs:9			
Optimization By Structural Theorems. Maxwell Mitchell and Heymans Theorem for Structures and Frames.						
<b>UNIT - V</b>			Lecture Hrs:9			
Optimization Techniques Applied to Fully Stressed Design With Deflection Constraints, Optimality Criterion Methods.						
<b>Textbooks:</b>						
<ol style="list-style-type: none"> <li>1. Optimum Structural Design, Civil Engineering and Engineering Mechanics Services, Spunt, Prentice Hall New Jersey, 1971.</li> <li>2. Course Code	21D12302	CAD AND COMPUTER APPLICATIONS IN STRUCTURAL ENGINEERING (PE – V)	L	T	P	C
Semester	III			3	0	0
<b>Course Objectives:</b> This course will enable students:						
<ol style="list-style-type: none"> <li>1. Calculation of distribution of forces within the structure and the displaced state of the system forms the crux of design process.</li> <li>2. To learn computer aided methods of analysis adopted in industry for such purposes.</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1. Have an overall understanding of CAD concepts and CAD system developments</li> <li>2. Demonstrate the geometry transformation of 2D and 3 D models and its application in CAD systems</li> <li>3. Have an understanding of mathematical representation of computational geometry by planar and space curves and surfaces defined by different boundary curves</li> <li>4. Have knowledge of Engineering optimization using non-linear programming and to introduce stochastic search techniques</li> <li>5. To understand the importance of Data Base Systems in CAD systems</li> </ol>						
<b>UNIT - I</b>			<b>Lecture Hrs:10</b>			
<b>INTRODUCTION TO COMPUTER AIDED DESIGN</b> – Reasons for Implementing CAD – Design Process – Applications of Computers to Design – Benefits of Computer Aided Design. <b>PRINCIPLES OF COMPUTER GRAPHICS</b> – Introduction, Graphic Primitives, Point Plotting, Drawing of Lines, Bresenham’s Algorithm, C Program to Draw A Line, Circle, Ellipse Using Breasenham’s Algorithm.						
<b>UNIT - II</b>			<b>Lecture Hrs:10</b>			
<b>TRANSFORMATION IN GRAPHICS</b> – Coordinate System Used Lin Graphics & Windowing, View Port, 2 – D Transformations, Clipping, 3-D Transformation; C-Graphics.						
<b>UNIT - III</b>			<b>Lecture Hrs:10</b>			
<b>STIFFNESS METHOD:</b> Microsoft Excel Procedure for Stiffness Method of Analysis Step – By Step Procedure Using Excel, Examples Using Excel.						
<b>UNIT – IV</b>			<b>Lecture Hrs:9</b>			
<b>ANALYSIS OF BEAMS USING STIFFNESS METHOD</b> : Long hand solution of single span beams, continuous beams solution of single span beams, continuous beams using Excel						
<b>UNIT - V</b>			<b>Lecture Hrs:9</b>			
<b>DATABASE:</b> Introduction, Concept of A Database, Objectives of Databases, Design of Data Base, Design Consideration of Data Base.

Course Code	21D11302	COST EFFECTIVE HOUSING TECHNIQUES (PE – V)	L	T	P	C
Semester	III			3	0	0
<b>Course Objectives:</b> This course will enable students:						
<ol style="list-style-type: none"> <li>1. To possess comprehensive knowledge of planning, design, evaluation, construction and financing of housing projects.</li> <li>2. To focuses on cost effective construction materials and methods.</li> <li>3. To understand on the principles of sustainable housing policies and programmes.</li> <li>4. to adopt the suitable techniques in rural and disaster prone areas by using locally available materials.</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1 Development of construction technology and innovative techniques as tools to address demand mass construction</li> <li>2 Knowledge of eco-friendly material with their application</li> <li>3 Learn the use of locally available material according to their availability and maintenance</li> </ol>						
<b>UNIT - I</b>						<b>Lecture Hrs:10</b>
<p><b>Housing Scenario:</b> Introduction - Status of Urban Housing - Status of Rural Housing</p> <p><b>Housing Finance:</b> Introducing - Existing Finance System in India - Government Role As Facilitator - Status At Rural Housing Finance - Impedimently in Housing Finance and Related Issues</p> <p><b>Land Use and Physical Planning for Housing:</b> Introduction - Planning of Urban Land - Urban Land Ceiling and Regulation Act - Efficiency of Building Bye Lass - Residential Densities</p> <p><b>Housing The Urban Poor:</b> Introduction - Living Conditions in Slums - Approaches and Strategies for Housing Urban Poor</p>						
<b>UNIT - II</b>						<b>Lecture Hrs:10</b>
<p><b>Development and Adoption of Low Cost Housing Technology</b></p> <p>Introduction - Adoption of Innovative Cost Effective Construction Techniques - Adoption of Precast Elements in Partial Prefatronics - Adopting of Total Prefactcation of Mass Housing in India- General Remarks on Pre Cast Rooting/Flooring Systems -Economical Wall System - Single Brick Thick Loading Bearing Wall - 19cm Thick Load Bearing Masonry Walls - Half Brick Thick Load Bearing Wall - Flyash Grypsym Thick for Masonry - Stone Block Masonry - Adoption of Precast R.C. Plank and Join System for Roof/Floor in The Building</p>						
<b>UNIT - III</b>						<b>Lecture Hrs:10</b>
<p><b>Alternative Building Materials for Low Cost Housing</b></p> <p>Introduction - Substitute for Scarce Materials – Ferrocement - Gypsum Boards - Timber Substitutions - Industrial Wastes - Agricultural Wastes - Fitire Starateru; for ,P,Topm of Alternative Building Maintenance</p> <p><b>Low Cost Infrastructure Services:</b></p> <p>Introduce - Present Status - Technological Options - Low Cost Sanitation - Domestic Wall - Water Supply, Energy.</p>

Course Code	21D10301	GREEN BUILDINGS (OPEN ELECTIVE)	L	T	P	C
Semester	III		3	0	0	3
<b>Course Objectives:</b> This Course Will Enable Students:						
<ol style="list-style-type: none"> <li>1. Exposure to the green building technologies and their significance.</li> <li>2. Understand the judicious use of energy and its management.</li> <li>3. Educate about the Sun-earth relationship and its effect on climate</li> <li>4. Enhance awareness of end-use energy requirements in the society</li> <li>5. Develop suitable technologies for energy management</li> </ol>						
<b>Course Outcomes (CO):</b> Student will be able to						
<ol style="list-style-type: none"> <li>1. Understand the fundamentals of energy use and energy processes in building</li> <li>2. Identify the energy requirement and its management.</li> <li>3. Know the Sun-earth relationship vis-a-vis its effect on climate.</li> <li>4. Be acquainted with the end-use energy requirements.</li> <li>5. Be familiar with the audit procedures of energy.</li> </ol>						
<b>UNIT - I</b>						<b>Lecture Hrs: 10</b>
Introduction What is Green Building, Why to go for Green Building, Benefits of Green Buildings, Green Building Materials and Equipment in India, What are key Requisites for Constructing a Green Building, Important Sustainable features for Green Building,						
<b>UNIT - II</b>						<b>Lecture Hrs: 10</b>
Green Building Concepts And Practices Indian Green Building Council, Green Building Moment in India, Benefits Experienced in Green Buildings, Launch of Green Building Rating Systems, Residential Sector, Market Transformation; Green Building Opportunities And Benefits: Opportunities of Green Building, Green Building Features, Material and Resources, Water Efficiency, Optimum Energy Efficiency, Typical Energy Saving Approach in Buildings, LEED India Rating System and Energy Efficiency,						
<b>UNIT - III</b>						<b>Lecture Hrs:</b>
Green Building Design Introduction, Reduction in Energy Demand, Onsite Sources and Sinks, Maximize System Efficiency, Steps to Reduce Energy Demand and Use Onsite Sources and Sinks, Use of Renewable Energy Sources. Eco-friendly captive power generation for factory, Building requirement,						
<b>UNIT - IV</b>						<b>Lecture Hrs: 9</b>
Air Conditioning Introduction, CII Godrej Green business centre, Design philosophy, Design interventions, Energy modeling, HVAC System design, Chiller selection, pump selection, Selection of cooling towers, Selection of air handling units, Precooling of fresh air, Interior lighting system, Key feature of the building. Eco-friendly captive power generation for factory, Building requirement. Envelope design basics, ECBC compliant design strategy for a building, Compliance approaches viz. Prescriptive, Whole building Performance and Trade off approaches. Introduction to Eco Nivas Samhitha (ENS) and software tool for checking building energy, carbon, lighting and comfort performance.						
<b>UNIT - V</b>						<b>Lecture Hrs: 9</b>
Material Conservation Handling of non-process waste, waste reduction during construction, materials with recycled content, local materials, material reuse, certified wood ,Rapidly
